

PLUTO Lesson:

Download gPLUTO:

<https://plutocode.ph.unito.it/pluto-gpu.html>

Export modules and ambient variable to compile PLUTO

```
module load gcc/13.2.0
export PLUTO_DIR=~/.gPLUTO/
```

Install the Python PLUTO visualization library

PyPLUTO is freely distributed and can be downloaded independently from PLUTO at the GitLab repository: <https://pypluto.readthedocs.io/en/stable/>

To install pyPLUTO on the Cluster we will use conda environment

```
module load miniconda/python-3.12
```

```
conda init
```

```
source ~/.bashrc
```

```
conda activate
```

```
conda create -n pluto python=3.12
```

```
conda activate pluto
```

Install all the python packages that you want to use INSIDE the conda environment

```
pip install py-pluto
```

```
python -m pip install h5py
```
